#### **Atkinson.**

Atkinson teaches the claimed invention including a memory which can be an Extended Data Out Dynamic Access Memory (EDO DRAM) in a computer. The computer can be put in a suspend mode to save energy (e.g., see Figure 2A). When the computer is in the suspend mode a divide by two counter is used in the memory refresh logic to send the refresh signal to the EDO DRAM to maintain the memory (e.g., see Figure 3A and 3B). When in a normal mode of operation the divide by two counter is not used instead the regular counter in the refresh logic is
